

Robin Oldham

Chief Information Security Officer

Cydea

Robin Oldham is the founder of Cydea, a positive cyber security consultancy, and previously lead BAE Systems' Security Advisory & Technical Services business, recognised by Forrester as one of the leading information security consultancies. His information security newsletter informs hundreds of subscribers on the most relevant, interesting and useful stories and developments each week.

Robin helps businesses defend themselves from cyber attack and thrive in the digital world and has over fifteen years of experience including advising numerous boards on how to manage crises resulting from cyber-attack.

When not wearing a cape, Robin works with financial services, energy, telecommunications and transport clients, as well as central and secure government departments, to better prepare and protect their interests. By better understanding their cyber threat and risk landscape, Robin helps them build resilient, defensible architectures and implement efficient security operations.

Previously Robin worked for Multiplay – a world-leading esports festival and enterprise game hosting provider – where he regularly built and secured 3000-node, high-performance networks within 24 hours.

Robin has a first-class degree in Digital Forensics from the University of Portsmouth and is a mentor to cyber technology startups from the CyLon incubator.

Speaking and media experience

Robin has spoken and moderated panel discussions internationally for events like Confederation of British Industry, SIBOS Geneva, Toronto and Sydney and Post Trade Nordics. He has been interviewed and quoted by media organisations including The Washington Post, The Telegraph and BBC News.
